Aircraft Fact Sheet

OUR ORIGIN STORY

- **2010:** Our team set out to explore the possibilities of electric, vertical takeoff and landing flight.
- **2019:** Our team and its generations of aircraft became Wisk through a joint venture between the Boeing Company and Kitty Hawk Corporation.
- **2023:** Wisk became a fully-owned subsidiary of Boeing. While we operate separately, this relationship allows us to tap into Boeing's development, testing, and certification expertise, and more.

ABOUT WISK

Wisk is a leading Advanced Air Mobility (AAM) company and developer of the world's first self-flying, all-electric, four-seat eVTOL air taxi. Since 2010, Wisk has developed six generations of aircraft, resulting in the industry's largest fleet of AAM eVTOL aircraft. Wisk is fully backed by The Boeing Company but continues to operate separately.

- People: 700+, with most in engineering, manufacturing, and flight test
- Locations: U.S., New Zealand, Canada, and Australia
- Patents Issued: 230+
- Test Flights: +1,600 (full-scale aircraft)

AIRCRAFT FACT SHEET

The world's first self-flying, four-seat, all-electric air taxi.

Cruising Altitude: 2000-4000 ft
Dimensions: Less than 50' wingspan
Range: 50 miles with reserves
Cruising Speed: 110-120 knots

Our Company

Wisk Aero is to provide safe, everyday flight for everyone. Wisk is at the forefront of the Advanced Air Mobility (AAM) industry and since 2010 we have:

- Developed and successfully flown five generations of aircraft
- Conducted 1000+ safe successful test flights without an incident
- Expanded across the globe to locations in New Zealand, Australia, and Canada

We are committed to autonomous flight, and were the first company in the US to be authorized by an autonomous air taxi.

Wisk enjoys a strong strategic partnership with Boeing, and has been able to draw upon Boeing's extensive aviation, engineering, and certification expertise. In January of 2023, Boeing committed to an additional \$400M investment in Wisk.

Our 6th Generation Aircraft

Our 6th Generation aircraft represents the first ever candidate for FAA certification of an autonomous passenger-carrying eVTOL air taxi. We've designed the aircraft to exceed today's rigorous aviation safety standards, while also bringing a new level of passenger comfort to air travel.

With this aircraft, we will revolutionize existing concepts of flight and deliver a safe, reliable, and more comfortable air taxi. Generation 6 will set the standard for the air taxi market and the future of travel by bringing:

- A safety-first approach
- Autonomous flight with human oversight
- Aviation certified design and customer experience
- Affordability and accessibility

By combining industry-leading autonomous technology and software, human oversight of every flight, and an overall certified design, Generation 6 is the most advanced air taxi in the world, and will be one of the safest passenger transport systems in commercial aviation.
